

## Splitta 400

Fully Automatic High Production Logs and Kindling Machine

### Technical Specifications

#### Overall Dimensions:

- > See below

#### Overall Weight:

- > 1900 kg

#### Power Supplies:

- > 415v 3 Phase 63 amp socket
- > 30 kW (incl. power for Splitting Machine)
- > PTO drive option

#### Timber Input:

- > Diameter 40 cm (16") maximum  
13 cm (5") minimum

#### Timber Output:

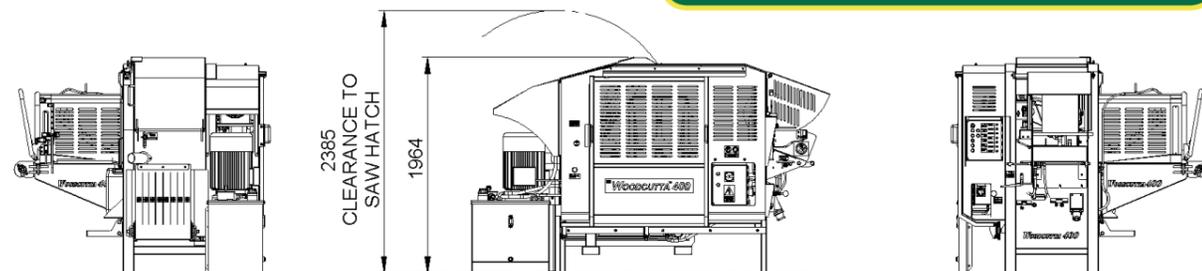

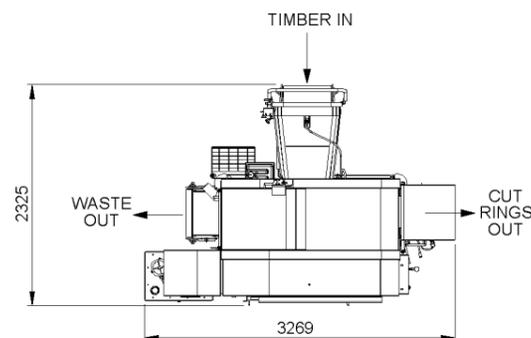

- > Cut Lengths - adjustable 15 cm (6") to 33 cm (13")
- > Theoretical output - see panel

#### Cutting:

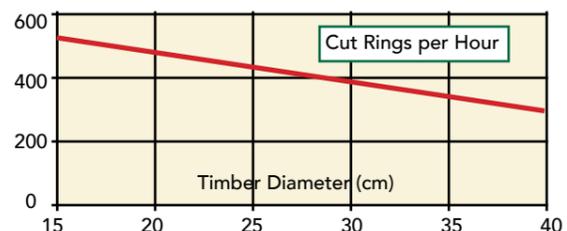

- > Hydraulic chainsaw with .404" Chain and Harvester Bar
- > Dedicated lubrication system

#### Handling:

- > Automatic operation
- > Separate Feed & Waste Conveyors
- > Cut ring transferred by hydraulic arm

### Machine Output

The graph above shows the theoretical output of Woodcutta running continuously.

The table below shows the theoretical output of Fuelwood Factory (Woodcutta and Splitta) running continuously based on a ratio of 1.8 loose product to solid timber. The following factors should be taken into account when assessing achievable outputs -

- > The diameter of the timber being processed
- > The ability of the bagging operator(s) to keep up with the machine when doing nets
- > The length of time that the machine is run in a shift

Timber Size	Diameter (cm)	Length (cm)	Solid m3 per hour	Bulk Bags per hour
Maximum	40	33	12.4	22
Average	30	25	6.8	12
Minimum	15	20	1.7	3

## Woodcutta 400™

Cost Effective Automatic Cutting

*Designed & Manufactured in the UK*

Woodcutta is a fully automated cross-cutting machine that can be linked to a variety of splitting machines to provide a complete line-up for converting timber lengths into split logs or kindling.

Woodcutta converts the timber into cut rings using a hydraulic chainsaw and can then pass these rings to either Splitta 360, Splitta 400 or Kindlet Pro. The rings can cut to any length between 15 cm and 33 cm to suit the length requirement of the final product.

Woodcutta was first introduced onto the market in the year 2003 and thus has had a significant time in the field to demonstrate its effectiveness and reliability. This latest development of Woodcutta has been aimed at simplification where possible, without compromising function and performance. It incorporates some significant improvements such as -

#### Key Features:

- > Reduced footprint to ease installation
- > Better access for maintenance and operation
- > Reduced maintenance and increased life
- > Centralised Operator control
- > Simple visual feed back of automatic operation
- > Simplification of coupling with Splitting machines
- > PTO drive option
- > New sawdust extraction

# Fuelwood Factory

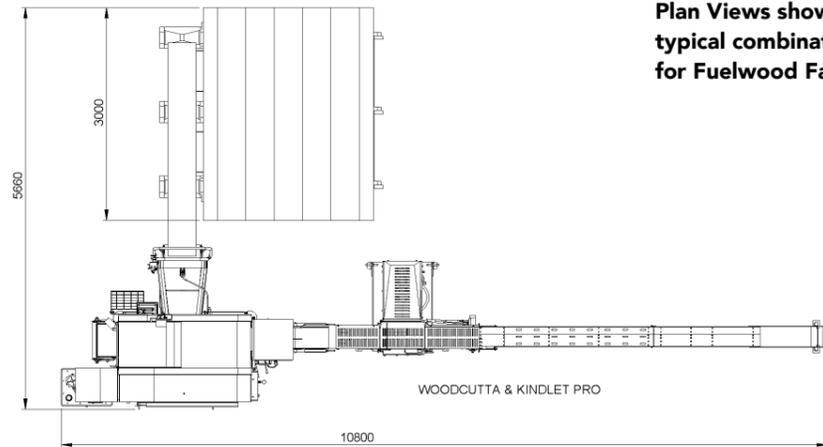

Cost Effective Automatic Cutting

Fuelwood Factory is a term used to describe a combination of Woodcutta and a compatible Splitting Machine (Splitta 400, Splitta 360, Kindlet Pro) together with other optional equipment to suit the individual Customer needs.

This combination provides an automated processing line to convert Timber from the round into split produce (logs or kindling).

Optional equipment is available to enhance the productivity of this processing line and is outlined below.

Plan Views showing typical combinations for Fuelwood Factory

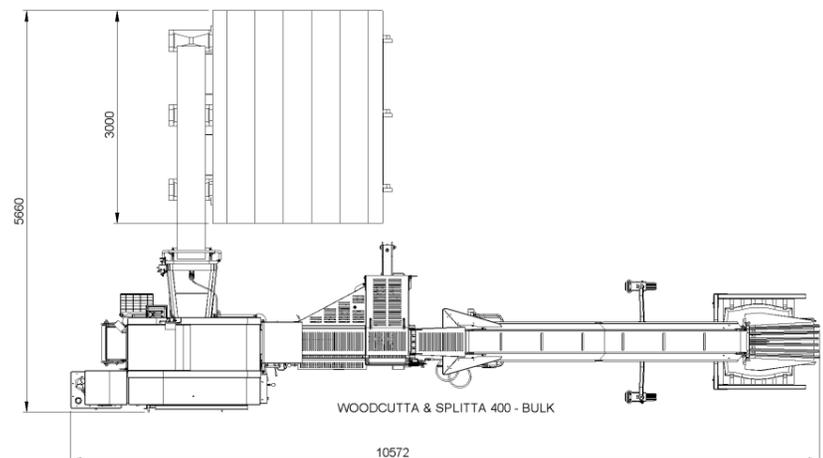

## ELEVATOR

- > 4.5 metres long
- > Hydraulic elevation
- > Hydraulic Drive

## CLEANA

- > Removes slivers and debris
- > Waste into standard bulk bags
- > Adjustable angle

## MANUAL BAGGA

- > Suitable for logs and kindling
- > Adjustable for different lengths of produce
- > Links to Splitta 400, Splitta 360 and Kindlet Pro
- > Adjustable height

## TIMBER DECK

- > Large capacity
- > Three chain drive
- > Timber up to 4 metre length
- > Adjustable height
