Japa – Quality From the North

Japa firewood processors are developed and manufactured in Laitila, Southwest Finland, with decades of experience. The first products from our factory were delivered to our customers already in 1977. Japa is a market leader in firewood processors intended for professional use, and a number of recreational users also rely on our machines.

Product development is key

Throughout its history, Japa has invested heavily in product development. All Japa products are the results of our own product development. Our product development team continuously strives to create well-thought-out and tested machine features and minor details. This results in high-performance devices that can be supplemented with diverse accessories, as necessary.

Safe solutions for our customers

Product safety is crucial for us. Many of our machines are equipped with a hydraulic chain saw, and the cutting chain only rotates when cutting wood with the guard in place. We want to be absolutely certain that using our machines involves as little risk as possible. This is why our machines are equipped with extensive guards, an automatic stop function and other innovative methods of ensuring user safety. We always recommend the use of appropriate safety equipment, such as work clothing, ear protection, protective goggles and safety shoes.

The right product for each need

Japa offers alternatives for different uses and conditions. The Off Road range offers unparalleled mobility regardless of terrain, whereas the larger machines act as firewood factories for professional users. We can ensure that our range provides a durable high-quality product for every user.

Splitting blades

Whether you are a recreational or a professional user, we know that the blades are essential for the final result. You can always rely on Japa products to include premium blades. We can guarantee that our extensive blade selection will allow you to produce firewood in the size you like.

Japa's muscles

A top-notch firewood processor requires a top-notch engine. Japa firewood processors are equipped with the best engines available. We set very strict requirements for engines in all our models on starting properties and performance. All engines are provided by well-known manufacturers, such as Honda and Briggs & Stratton, and specifically selected for the Japa machines. In addition, we provide a selection of other power supply options.

Finnish production

Laitilan Rautarakenne has manufactured firewood processors with the Japa trademark since 1977. We believe in Finnish production and continuously develop our operation. We have 6,500 m² of modern production facilities, and in 2012 we invested in a new powder coating facility. In Finland, our products are sold by the Agco and Can-Am chains, NHK-Keskus Oy and a variety of long-standing private operators.

Our most significant export markets include the Nordic countries, Central and Eastern Europe, the UK and Japan.

Japa® Electric Cleaner

Japa Cleaner is an efficient drum cleaner with a large cleaning surface.

The height of the Cleaner is adjustable so it fits perfectly with almost any firewood processor.

Japa Cleaner is designed to remove small and large debris from the firewood leaving only the clean high class firewood left. With the inbuilt output conveyor clean firewood can be loaded directly in the racks, sacks or trailer. Japa Cleaner is available with electric and hydraulic motor powered versions.

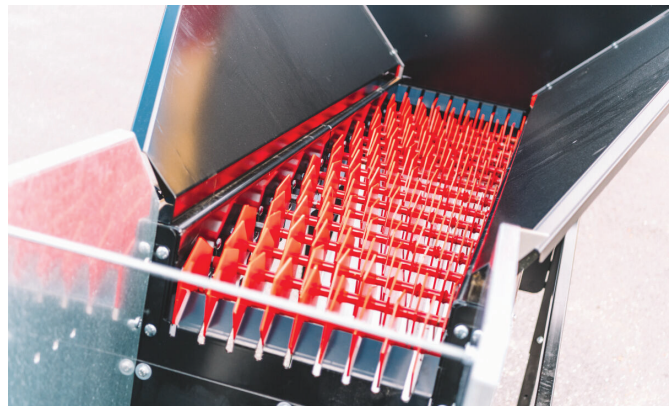

Japa® Electric Roller

Japa Roller is a highly efficient cleaner for the firewood.

Japa roller can be used directly after the firewood processor's output conveyor, or it can be loaded from the side with the loader. Perfect for the fresh or already dried wood. Japa Roller can be loaded from 3 different directions, which makes it really versatile tool. Same Roller cleaner can be used with several firewood processors at the same time.

Japa Roller is designed to clean efficiently small and larger debris leaving only clean first class firewood left. With the inbuilt output conveyor clean firewood can be loaded directly in the racks, sacks or trailer. Japa Roller is available with electric and hydraulic motor powered versions.
